Preventing Engraftment Rejection

Engraftment rejection is when the body tries to reject the transplanted cells. It can happen if the donor and recipient have different HLA types. The rejection process can be prevented by using immunosuppressive drugs.

Engraftment Rejection

Engraftment rejection is a common complication of bone marrow transplantation. It can occur when the transplanted cells do not successfully integrate into the recipient's body. The rejection process can be prevented by using immunosuppressive drugs.

Engraftment Rejection

Engraftment rejection is a common complication of bone marrow transplantation. It can occur when the transplanted cells do not successfully integrate into the recipient's body. The rejection process can be prevented by using immunosuppressive drugs.
